

Evaluation

Inputs

Assumptions (modeled)

at-risk not at-risk corona not corona influenza
not influenza

Assumptions (overridden)

☐ Override modeled assumptions for evaluation

Observations

flu ×

Conclusions

Evaluate all

Given the assumptions and the causal model, from the observation flu follows:

- influenza
- flu
- fever
- chills

For other atoms, no conclusions can be made.

Explanations

Evaluate short-of-breath

The conclusion for short-of-breath depends on:

- at-risk
- corona
